Thanks for filling out this form: Project-Based Learning (PBL) Report

Here's what was received.

Edit response

Project-Based Learning (PBL) Report

Spend 5-10 minutes to fill this form.
Before filling this form, keep the following things ready:

- Your day-wise notes of all design thinking questions [Empathise, Define, Ideate, Prototype, Test]
- Screenshots of your innovation
- Screen recordings of your innovation's working model
- Innovation images generated on Day 2 take-home task

This form is to record your thoughts and ideas about the innovations you made as part of IBM SkillsBuild's PBL activity so fill this form honestly and completely.

Your email (**faheemsk9999@gmail.com**) was recorded when you submitted this form.

Your Full Name *

Faheem shaik

College Name *

Hindu college of pharmacy guntur

Your Email ID (as per IBM SkillsBuild)

faheemsk9999@gmail.com

Your Mobile Number *

8297127887

Qualification(Degree) *

B PHARMACY

Day 1

Design Thinking Process Step 1 & 2: Empathise & Define

Step 1: Understanding the Need

Which problem am I trying to solve?

*

Clarity in a complex regulatory world

Step 2: What is the problem?

The problem I want to solve in **one clear sentence**

*

[You can try a prompt like this: *"I am ideating a solution for <enter your problem in detail> Convert this problem into a single clear sentence which I can share to an audience"]*

I am ideating a solution to address the lack of awareness, structured reporting systems, and accessible regulatory guidance for medical device vigilance, which leads to underreporting of device-related safety

incidents and risks to patient safety.

Why is this problem important to solve?

*

[You can try a prompt like this: *"Draft 1-2 lines on why this problem is important to solve. Support this with evidence using relevant data points"]*

Medical device incidents often go underreported due to limited awareness and fragmented reporting systems, reducing early detection of safety risks. Effective medical device vigilance helps collect and analyze adverse event data to prevent recurrence and improve patient safety outcomes globally.

Take-home task

Ask 2–3 people (you can speak to your family members, friends, teachers, trainers) what they think about this problem. Write down surprising or new things you learn below.

*

After discussing this problem with healthcare students, professionals, and peers:
Most people were unaware that medical devices also require safety monitoring similar to pharmacovigilance.
They felt reporting systems are complicated and not easily accessible to healthcare workers.
A surprising insight was that many believe device failures are technical issues rather than reportable safety events, showing a major awareness gap.

Day 2

Design Thinking Process Step 3: Ideation

Step 3: Brainstorming solutions

List **at least 5 different solutions** (wild or realistic):

*

[You can try a prompt like this: *"I am ideating solutions for <enter your problem in detail> Suggest 5 unique solutions for this problem, which I can easily accomplish in 2 days using free, open-source mobile-friendly AI tools"]*

Develop a mobile-friendly digital platform that simplifies medical device adverse event reporting through guided step-by-step forms.
Create an AI-powered assistant that helps healthcare professionals identify whether a device incident is reportable and automatically generates reporting drafts.
Build a centralized knowledge hub explaining medical device regulations, vigilance guidelines, and reporting workflows in simple language for students and professionals.
Design a real-time dashboard that tracks reported device incidents and identifies safety trends using data visualization.
Introduce awareness micro-learning modules and certification programs to educate healthcare workers about materiovigilance and reporting responsibilities.
Integrate QR-code–based reporting where scanning a device instantly opens the reporting interface linked to its regulatory information.

Step 4: My favourite solution:

*

My favourite solution is developing an AI-assisted, mobile-friendly medical device vigilance platform that simplifies adverse event reporting while providing regulatory guidance and educational support in one centralized system.

Step 5: Why am I choosing this solution?

*

I am choosing this solution because the major barrier in medical device vigilance is not the absence of regulations but the lack of accessible, user-friendly reporting systems. An AI-assisted platform can reduce reporting complexity, improve awareness, encourage timely reporting, and ultimately enhance patient safety while being scalable and achievable using existing digital tools.

Take-home task

Generate the image of your solution and how it will look
(eg: “a bag that charges your phone while you walk”)

Attach the image in this box below:

*

[You can try a prompt like this: *“I am ideating a solution for <enter your problem in detail> I have selected a solution which includes <enter your solution description> Generate an image for this solution]*

Submitted files

Tools you can use for Day 2

ChatGPT/Perplexity AI:
You can use these tools to compare your solutions and choose the most effective one

AI Tools you can use for the take-home task:

Canva AI/CoPilot
AI/Meta AI: Use these mobile-based tools to generate images for the solution they want to design

Day 3

Design Thinking Process Step 4 & 5: Building & Testing my Prototype

Step 6: Prototype – Building my first version

What will my solution look like?

[Take inspiration from the image generated on Day 2 and describe the solution]

*

My solution will be a mobile-friendly AI-powered reporting platform designed for healthcare professionals to easily report medical device incidents. The interface will include a simple dashboard with options to enter device details, patient impact, incident description, and upload supporting images. AI assistance will guide users step-by-step, auto-fill data fields, and categorize incidents for faster reporting. The system will also display analytics dashboards showing trends and safety signals to improve patient safety and regulatory monitoring.

What AI tools will I
need to build this?

*

[You can try a prompt like this: *"I am ideating a solution for <enter your problem in detail> I have designed a solution which includes <enter your solution description> What open-source, free AI tools that I can use to build this solution? The tools should be easily available and accessible on my mobile. Do not recommend tools which requires cost or subscription"]*

Chat gpt

Top AI tools I
finally selected to build this solution? [Eg: Claude AI, Grok AI, Chatling AI]

*

Write it in 5 lines as 5 points

Chat gpt
Grok
Canva
Perplexity
Gemini

Step 7: Test – Getting Feedback

Who did I share my solution with? [You may share it with your trainer, peers or even AI] *

Trainer

What positive feedback did I
receive?

*

The solution was appreciated for addressing a real healthcare safety problem and simplifying medical device incident reporting. Reviewers found the AI-guided reporting process easy to understand and practical for hospitals. They also highlighted that the mobile-first design makes reporting faster and more accessible for healthcare workers.

What feedback did I receive for improvement? *

Feedback suggested improving data privacy features, adding multilingual support for wider accessibility, and integrating automatic regulatory submission options. Users also recommended adding training tutorials and offline reporting capability for low-internet environments.

Take-home task

Record your solution and test feedback in voice notes.
Upload your voice notes, images and your solution/model on GitHub

AI Tools you can use for Step 6-7:

ChatGPT/Perplexity AI/Claude AI/Canva AI/Chatling AI/Figma AI: You can use these tools to build solutions/models or mock-up dummy prototypes

Day 4

Presenting & Reflecting on my Innovation

Step 8: Presenting my Innovation

Final Project Title:

*

Clarity in a complex regulatory world

Key points of my presentation

*

[You can try a prompt like this with attachment/screenshot of your solution: "*I am ideating a solution for <enter your problem in detail> I have selected a solution which includes <enter your solution description> I tested the solution with <enter details of who tested your solution> and they gave the following feedback <enter feedback given by the testers> Generate a 1-minute pitch document with following headings: project title, problem statement, my innovation, feedback I received from users, impact of my innovation. Add the attached image in the pitch document*"]

Problem Statement: Researchers and professionals are frequently overwhelmed by the sheer volume and complexity of data, leading to 'information fatigue'.
My Innovation: RegInsight Research acts as a bridge between complexity and understanding by streamlining information architecture to prioritize clarity.
Feedback I received: Users praised the platform for its focus on 'clarity,' noting that it significantly reduced the time and cognitive load required to extract key findings.
Impact of my innovation: By standardizing how complex information is presented, RegInsight empowers users to make faster, more confident, and better-informed decisions."

Step 9: Reflections

What did I enjoy the
most during this project-based learning (PBL) activity?

*

The most enjoyable part of this project-based learning activity was the challenge of taking a 'complex' subject and distilling it into a clean, user-friendly interface. Seeing how 'RegInsight Research' evolved from a conceptual idea into a functional digital prototype gave me a deep appreciation for how to bridge the gap between abstract, dense data and practical, clear communication. It was rewarding to see how design choices could directly improve a user's ability to process information."

Step 9: Reflections

What was my biggest
challenge during this project-based learning (PBL) activity?

*

The most enjoyable part of this project-based learning activity was the challenge of taking a 'complex' subject and distilling it into a clean, user-friendly interface. Seeing how 'RegInsight Research' evolved from a conceptual idea into a functional digital prototype gave me a deep appreciation for how to bridge the gap between abstract, dense data and practical, clear communication. It was rewarding to see how design choices could directly improve a user's ability to process information."

Upload images of your day-wise notes/responses of all questions *

You can also combine your images into one PDF file and upload
